

BANK-AWARE TRANSFER RULE REPLAY

Did a fair budget rescue the simple transfer rule?

Entry 816200 | FPL 2025/26

A leak-free rematch of 46 non-chip transfers

One change: the rule can use your bank.

OLD CAP

sale price

FAIRER CAP

sale + T-1 bank

UNCHANGED

filters, ranking,
scoring

Position match | prior squad exclusion | 45+ prior mean minutes | prior 4-GW form

46 transfers | chip GWs 6, 13, 23, 34 excluded | windows stay [T-4, T-1]

The fair budget did not close the gap.

RULE MINUS ACTUAL

-197

784 actual points

587 rule points

45 scored transfers | -4.38 per transfer

The sale-only rule was -191. The added bank changed 13 picks and cost 6 more points.

A fairer cap did not close the gap.

Actual's advantage grew by 6 points when every transfer could use the bank.

SALE PRICE ONLY

191

actual advantage

SALE + PRE-DEADLINE BANK

197

actual advantage

BUDGET-CAP DEFICIT REMOVED 0 | FAIR-BUDGET DEFICIT LEFT 197 | CHANGE +6

Fair budget lifted wins, not the points gap.

Outcome counts improved while the average gap barely moved.

BANK-AWARE

-4.38 pts / transfer
n=45 scored

SALE-ONLY

-4.44 pts / transfer
n=43 scored

Extra budget changed 13 picks, lost 6 points.

The added budget changed choices, but the new choices did not improve the replay total.

13

picks changed

33 stayed the same

-6

net rule points

bank-aware minus sale-only

13 changed

33 unchanged

Fair cash did not fix the three biggest misses.

The rule kept its old picks after the cap rose.

Gabriel missed the minutes screen. Wilson and Bruno G. lost the form ranking.

Two things a bigger budget cannot buy.

11 of 46

BUYS THE RULE CANNOT MAKE

Injury and rotation returns like Gabriel (24 min) and Saka (29 min) fail a mechanical 45-minute filter, even when affordable.

+0.35 vs +0.19

xGI BEATS FORM

Trailing xGI ranks an attacker's next 4 gameweeks of goals about twice as well as trailing form (Spearman, prior study). The rule ranks by the weaker signal.

You backed players a filter rejects and read situations a form score misses. Money does not close that.

Use it to shortlist, not to decide.

1 **Use all package cash.**

Count the bank and cash released by every planned sale.

2 **Screen attackers with trailing xGI.**

Use recent FPL points as context, not the engine.

3 **Keep the minutes check, then add role and fixtures.**

Availability protects the shortlist, but it does not finish it.

4 **Let the rule narrow options.**

Make the final call with the whole squad and transfer package in view.

Keep judgment, upgrade the signal.

READ THE RESULT WITH THESE LIMITS

- One manager and one season. This is descriptive, not causal.
- 37 of 46 moves were in multi-transfer GWs. Full-bank primary: -197. First-leg-only sensitivity: -170 across a smaller scored set.
- Four actual buys also used cash released by another same-GW leg, so sale plus prior bank was not always the full package budget.
- Only 35 actual incoming players passed every locked filter. Minutes and feature-price quirks still excluded real buys.
- Holding windows ignore captaincy, benching, hits, and whether the rule pick would start.
