What changed overnight

You moved from 6th to 5th. Your score went from 32 to **48**. Three more matches finished, so nine of the ten are now done. Only Fulham against Chelsea is left.

Last night I told you that you could not lose ground to the leader, because every player he had left was also in your team and you captained Haaland while he did not. That held. **The gap closed from 23 points to 11**. That manager has since renamed from “Andy Mcgoonface” to “Oziandy Towner”, so I tracked them by their team id rather than their name.

But someone else jumped both of you. Aparajit Roy played a Bench Boost, gained 37 points overnight, and went from sixth to first.

The template blanked

The template is the group of players most managers own. This week it failed almost everyone. **11 of the 15 most-owned players scored 2 points or fewer.** The average was 2.9 points.

Player	Position	Club	Owned by	Counting captains	Points	You own?
Calafiori	DEF	ARS	59%	59%	9	Yes

Notice who did deliver. Every one of the four template players who beat 2 points plays for Arsenal: Calafiori, Raya, Tzolis and Gabriel. Arsenal beat Coventry 3-0. If you did not own Arsenal players this week, you had a bad week.

The clearest example of the blank is your own captain. Haaland was owned by 77% of the league and captained by 14 of 22 managers. He returned [2 points](#). Because you doubled him, he gave you 4.

That sounds bad, and it was. But it hurt your rivals just as much. When a player that popular fails, owning him costs you nothing in the league table. It only costs you against managers who picked someone else, and almost nobody did.

Your climb came from the middle of your squad, not the top. Calafiori and Ndiaye scored 9 each, and Szoboszlai scored 8. Your two most expensive attackers, Haaland and Igor Thiago, cost £23.5m together and scored 2 points between them, which the armband turned into 4.

Your bench scored 14 points you could not use. Vuskovic got 6 and Ampadu got 5. Had you played your Bench Boost this week, you would be on 62 points and sitting third.

The chip, not the picks, decided the top

Three of the top four managers played their Bench Boost this week. The best manager who did not use a chip is Oziandy Towner in third.

Be careful how you read this. Everyone gets the same chips. Playing one early is a gamble on a high-scoring week, and this week paid off. It does not make those managers better. It means they have one fewer chip to use later, and you still hold yours.

What the best managers did

I ranked every manager by their median finish over the last five seasons, because the median rewards being good every year rather than one lucky season.

#	Manager	Median finish	Rank this week	Points this week
1	Will Kenji	151,489	4	54
2	harrison white	151,736	21	26
3	Kieren Khatri	192,647	9	43
4	Wes Towner	343,588	14	35
5	Vishal Perera	360,721	2	63
6	Dhananjay Pandya	457,742	5	48

Look at the right-hand columns. The five most consistent managers finished all over the table this week, from second down to twenty-first. **One gameweek tells you almost nothing about who is good.** That is exactly why you should not change your plan based on this week.

The durable pattern is still the money. Those five managers keep defence between £14.5m and £16.5m and put between £30.5m and £42.5m into midfield. You spend £18.0m on defence and £24.5m on midfield. That is a **£9.7m midfield gap** against the managers who win most often, and it has not moved.

What to do next

Nothing this week. You still have a player to come: João Pedro, and everyone in the top six owns him too, so the finishing order is already settled.

Watch two numbers from here. First, your midfield spend against the £34m the best managers carry. Second, your chips. You still hold your Bench Boost, and this week showed what it is worth in a high-scoring gameweek.

Where the numbers come from

Everything here comes from the official Fantasy Premier League API, refreshed this morning with nine of ten matches played. Bonus points are not yet final, so small changes are still possible. Rebuild every number by running `scripts/league_report.py` and then `scripts/league_story.py`.
