

Man City and Arsenal create the most and concede the least

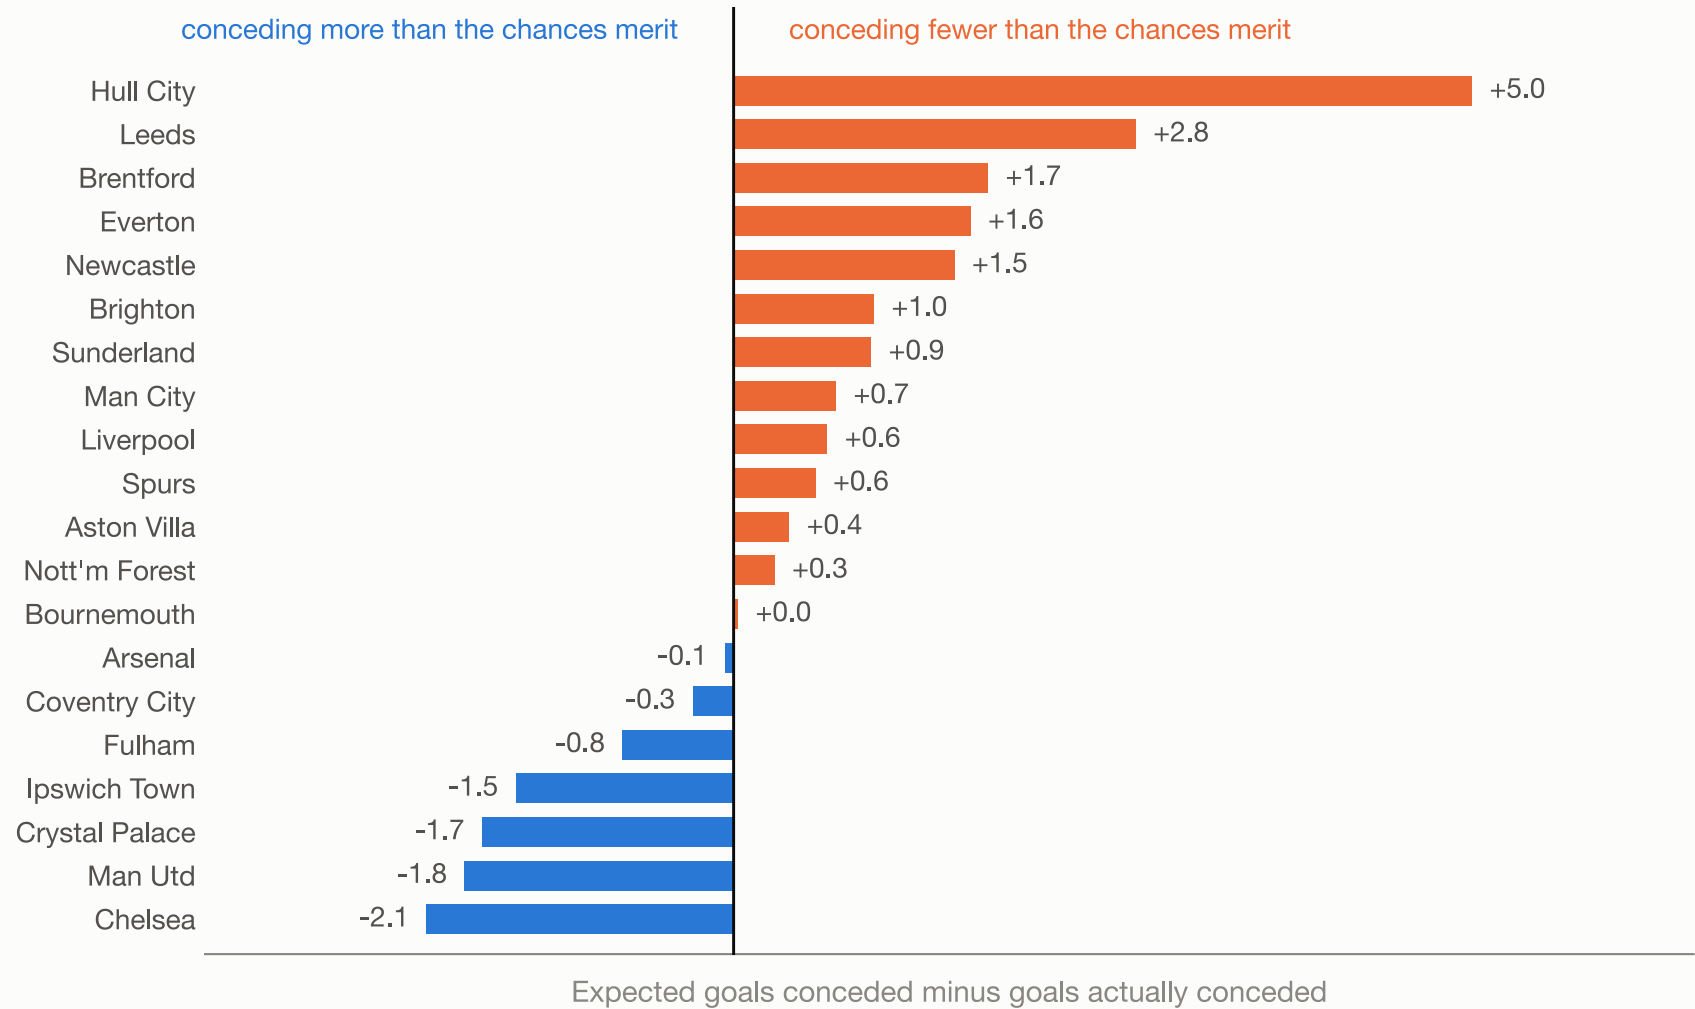

Gameweeks 1 to 3, 3 games per club. Expected goals measure the quality of chances, not the result. Three games is a small sample, so read this as a direction of travel rather than a settled ranking. Arsenal have the meanest defence at 0.31 expected goals conceded per game.

Newcastle are scoring 3.0 goals more than their chances deserve

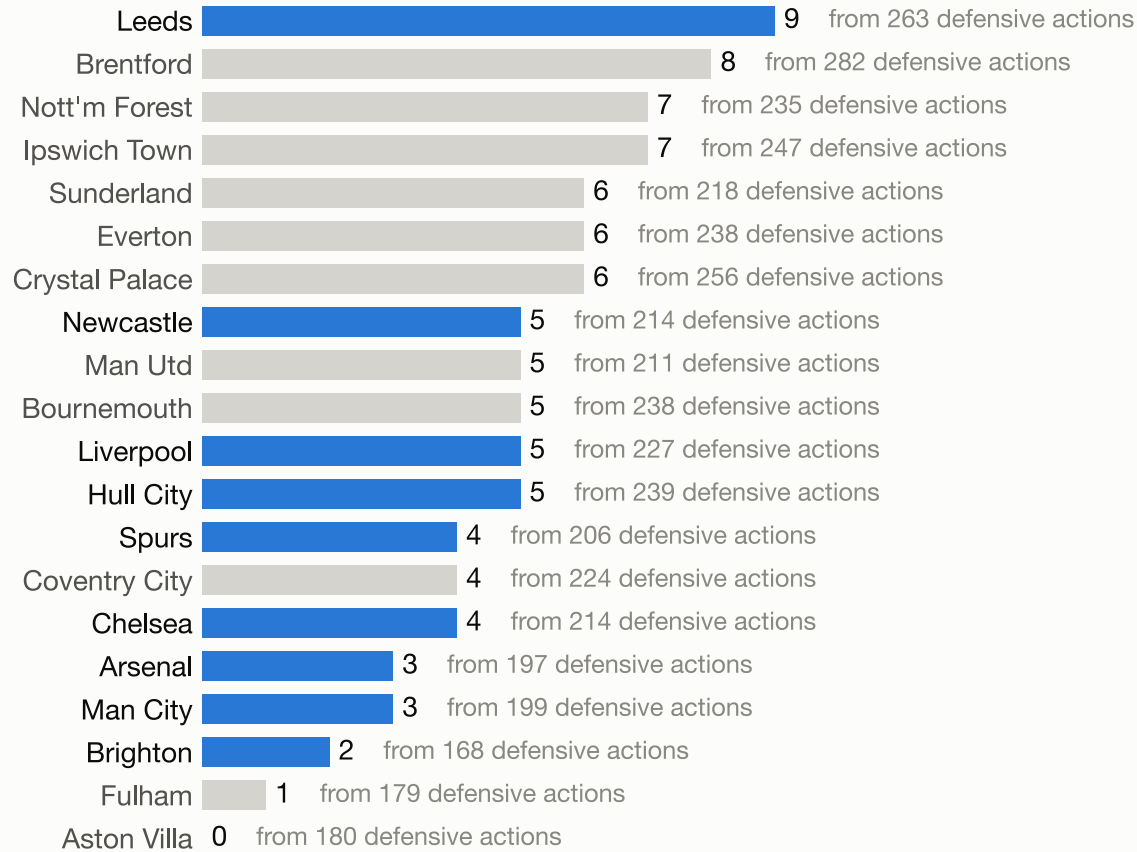

Gameweeks 1 to 3, 3 games per club. Expected goals measure the quality of chances, not the result. Three games is a small sample, so read this as a direction of travel rather than a settled ranking. Coventry City sit at the other end on -2.9, which usually corrects.

Hull City have conceded 5.0 fewer goals than their chances allowed

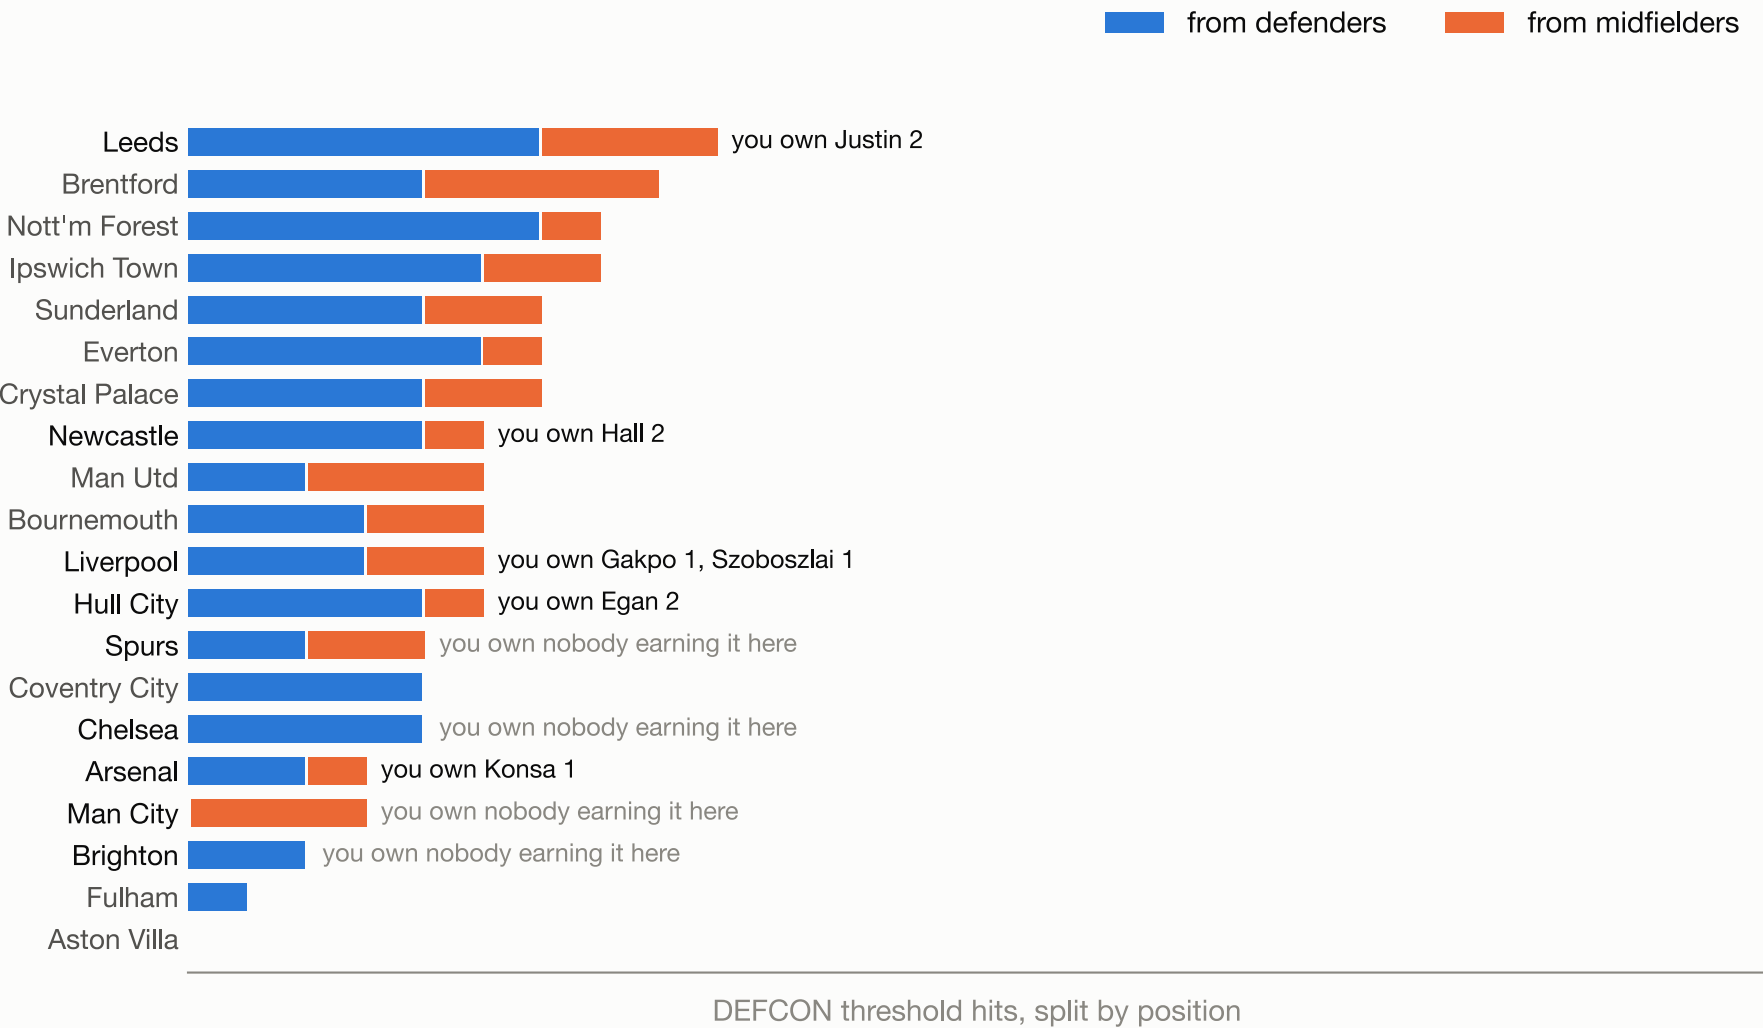

Gameweeks 1 to 3, 3 games per club. Expected goals measure the quality of chances, not the result. Three games is a small sample, so read this as a direction of travel rather than a settled ranking.

Leeds turn defending into points more often than anyone

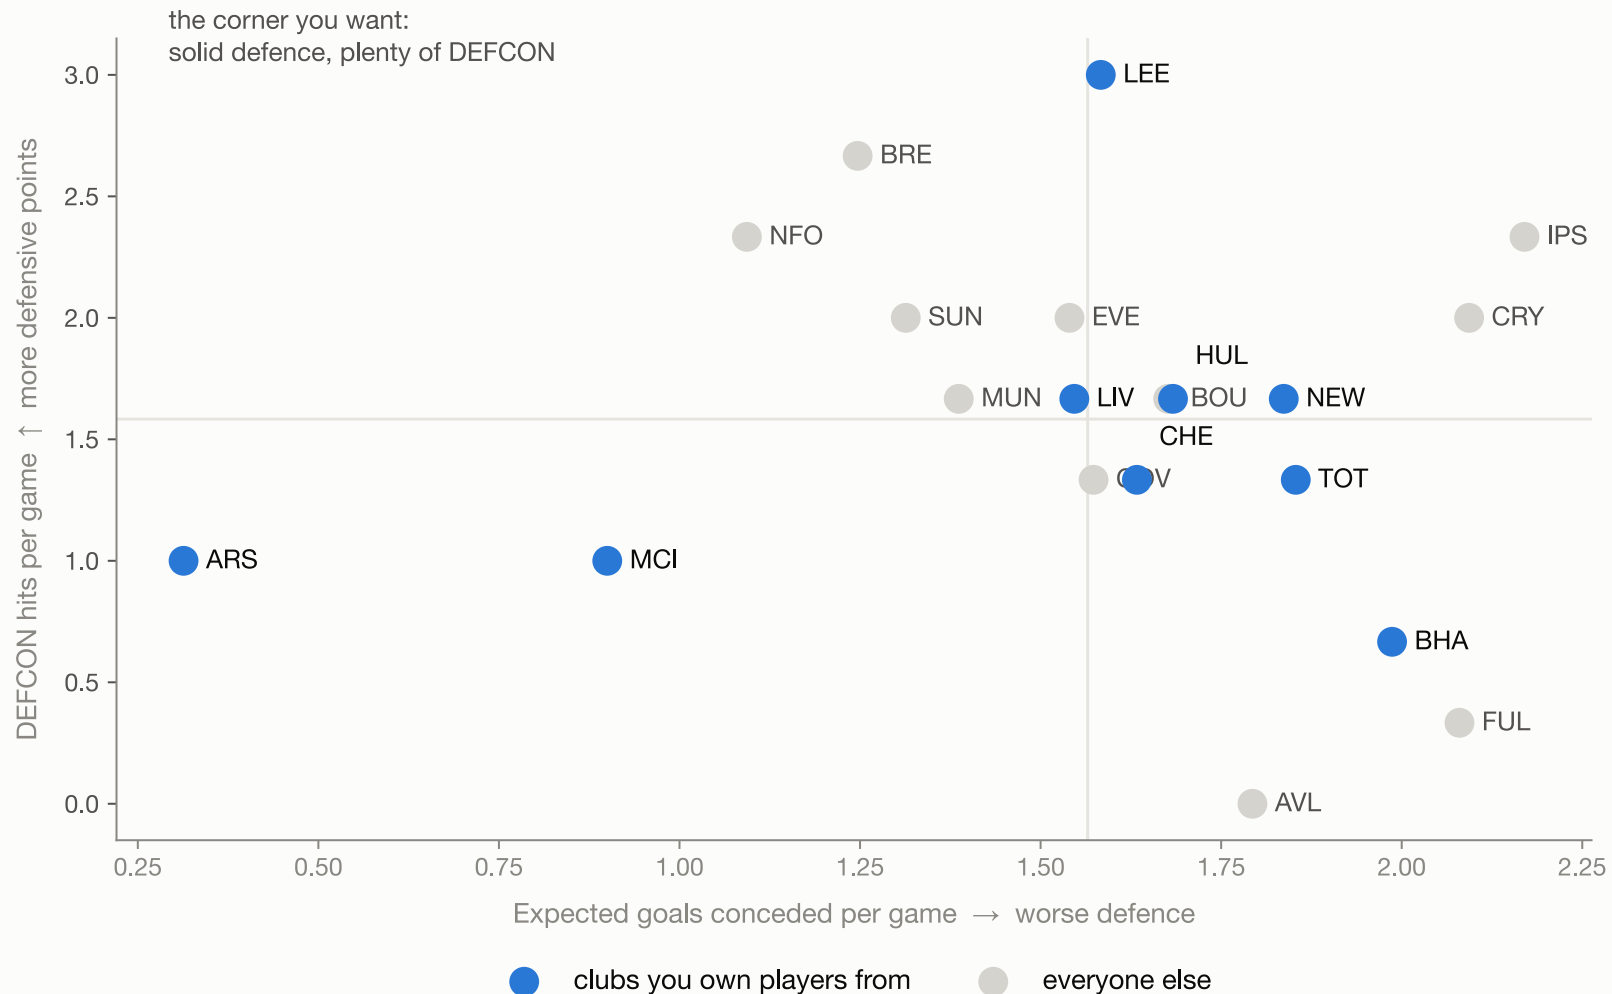

Times a player cleared his DEFCON threshold, Gameweeks 1 to 3

Defenders earn DEFCON 2.2 times as often as midfielders, and forwards never do

Gameweeks 1 to 3. Across the whole league defenders cleared their threshold 65 times, midfielders 30 times and forwards 0. Your own players are named beside their club.

Defending more does not mean defending badly

Gameweeks 1 to 3. The link between conceding chances and earning DEFCON is weak (correlation -0.07 across 20 clubs). Nott'm Forest sit closest to the corner you want: a tight defence that still banks defensive points.

How to read these. Expected goals count the quality of chances a team creates and allows. Over a season they predict goals better than goals themselves do, because finishing swings around a lot. The two gap charts show where results have run ahead of or behind the underlying play, and those gaps usually shrink. **The caveat:** 3 games is a very small sample. Fixtures have not evened out, so a club that has played three strong opponents will look worse than it is. Treat this as a prompt to look closer, not a verdict.
