Appendix

Where things stand

Only **1 of the 10 matches** in Gameweek 2 have been played, so nothing here is a result yet. Treat every score as a snapshot. What *is* settled is what each manager chose to do, and that is what this report is about.

You are 4th of 22 on 85 points. You made no transfer, which was your plan.

#	Manager	Points	Transfers	Hit	Defence	Midfield	Attack

22	Wayne Mungai	42	12	—	£18.5m	£38.5m	£13.5m

The league mostly stood still

15 of the 22 managers made no transfer at all. Only 7 moved. You were in the larger group.

Manager	Moves	Hit	Chip	In	Out
Wayne Mungai	12	—	Wildcard	M.Sangaré, João Pedro, Cherki, Kayode, Evanilson, Szoboszlai, Tzolis, Stach, Gabriel, Mendy, De Cuyper, Kinsky	Stach, Watkins, Ndoye, Konsa, David, Wirtz, Rogers, Semenyo, Maguire, Kerkez, Virgil, Sánchez
ashik Kavanakudy	2	−4	—	Calafiori, Trafford	Colwill, Raya
Blake Greig Canty	2	−4	—	João Pedro, Hall	Brobbey, Senesi
Nathan Vanjour	1	—	—	N.Williams	Konsa
Wes Towner	1	—	—	Gvardiol	O'Brien
Manoj Karthik	1	—	—	Mitchell	Greaves
James Moore	1	—	—	Tzolis	Gibbs-White

2 managers paid a points hit to make an extra move, costing 8 points between them. A hit means giving up 4 points for a transfer beyond the free one, so it only pays if the new player beats the old one by more than 4.

Wayne Mungai played a Wildcard and made 12 moves. A wildcard allows unlimited free transfers, so it does not cost points, but it is one of only two available all season.

A note on how this was counted. FPL reports a manager's transfer count as zero when they play a wildcard, even if they rebuilt the whole squad. Counting that field alone would have missed 12 moves, so these numbers come from each manager's full transfer log instead.

The bandwagon, and who actually got on it

These are the most-bought players across the entire game right now. One thing to be careful about: this counter resets at every deadline, so with Gameweek 2 under way it is already counting moves being made for Gameweek 3, not the ones made for this week. The last column is what matters to you: how many of your 22 rivals actually own each player.

Player	Club	Price	Bought across the game	Owned in your league
Cherki	MCI	£7.6m	193,172	2 of 22
Gvardiol	MCI	£5.5m	42,610	1 of 22
Palmer	CHE	£9.6m	33,025	2 of 22
De Cuyper	BHA	£4.6m	32,839	2 of 22
Haaland	MCI	£15.5m	25,992	17 of 22
M.Sangaré	BRE	£5.6m	19,268	1 of 22
Mendy	HUL	£4.0m	15,156	1 of 22
Gonzalo	FUL	£6.0m	14,924	0 of 22

Two things stand out, and both support the decision you made.

The Sangaré bandwagon has already cooled. Before the Gameweek 2 deadline he was being bought by about 176,000 managers. He is now down to 19,268, and the crowd has moved to Cherki, who is on 193,172 after scoring 14 points. Bandwagons move faster than a transfer can pay for itself.

And the national number was never your number. Sangaré is owned by 1 of your 22 rivals. A move that looks enormous across the game can be almost invisible in a 22-manager league, and your rank depends only on these 22 people.

What the best managers are doing

#	Manager	Median finish	Rank now	Points
1	Will Kenji	151,489	2	91
2	harrison white	151,736	21	50
3	Kieren Khatri	192,647	4	85
4	Wes Towner	343,588	16	62
5	Vishal Perera	360,721	3	87

#	Manager	Median finish	Rank now	Points
6	Dhananjay Pandya	457,742	4	85

The five most consistent managers are already spreading out again, which is the same pattern as last week. Two of them sit near the top and two near the bottom. It stays too early to read anything into it.

The structural difference has not moved, because you did not move. Those five carry about £34.2m in midfield against your £24.5m, a gap of **£9.7m**. They keep defence near £15.7m against your £18.0m.

What to watch

Your own plan was to wait for more information rather than spend a transfer, and this week's data supports that. Fifteen managers did the same, the biggest national bandwagon reached one team in your league, and nine of ten matches are still to play.

The question worth answering over the next three or four weeks is whether Sangaré's points come from goals and assists or from defensive contributions, because those repeat at very different rates. Defensive returns are the more repeatable of the two.

Where the numbers come from

The official Fantasy Premier League API, pulled during Gameweek 2 with 1 of 10 matches played. Transfer counts come from each manager's transfer log rather than the summary field, for the wildcard reason above. Rebuild everything with `scripts/league_report.py` then `scripts/league_story.py`.
