Why second place is not really second place

A mid-gameweek table flatters whoever happens to have played more of their squad. You have had 8 of your 11 starters play. Theeran Suntheradas has had 4.

To compare fairly, give every manager's remaining players the league average of 5.2 points each and see where the table lands. On that basis you are [ninth](#), not eighth.

Projected	Manager	Points now	Players still to play	Projected total
1	Vishal Perera	230	6	261
2	Andy Teelostabet	234	4	255
3	Will Kenji	222	4	243
4	Aparajit Roy	229	2	239
5	Patrick Le	211	5	237
6	Wes Towner	208	5	234
7	Karan Panat	220	1	225
8	harrison white	196	4	217
9	Dhananjay Pandya	197	3	213
9	Kieren Khatri	192	4	213

This is a levelling assumption, not a forecast. It does not know which players are left or who they face. Its only job is to stop you reading a lead that is really just a scheduling accident.

This is the same trap I fell into in Gameweek 1, when I told you the finishing order was settled after checking only the managers nearest you. Karan Yohannan then gained 25 points in the final match and climbed from fifteenth to join you. The fix is to always count what is still to come across the

whole table.

The league mostly stood still

8 of the 22 managers made no change to their squad. 14 moved. You were among those who moved.

1 manager paid a points hit to make an extra move, costing 4 points between them. A hit means giving up 4 points for a transfer beyond the free one, so it only pays if the new player beats the old one by more than 4.

Karan Panat played a Freehit and made 14 moves, James Moore played a Wildcard and made 13 moves, Aparajit Roy played a Freehit and made 11 moves, Blake Greig Canty played a Freehit and made 9 moves, ashik Kavanakudy played a 3Xc and made 2 moves, Andy Teelostabet played a 3Xc and made 2 moves, Will Kenji played a 3Xc and made 2 moves, Dhananjay Pandya played a 3Xc and made 2 moves, Andrew Daniels played a 3Xc and made 2 moves, Patrick Le played a 3Xc and made 1 moves, harrison white played a 3Xc and made 1 moves, Steven Kunej played a 3Xc and made 1 moves. A wildcard allows unlimited free transfers, so it does not cost points, but it is one of only two available all season.

A note on how this was counted. FPL reports a manager's transfer count as zero when they play a wildcard, even if they rebuilt the whole squad. Counting that field alone would have missed 60 moves, so these numbers come from each manager's full transfer log instead.

The bandwagon, and who actually got on it

These are the most-bought players across the entire game right now. One thing to be careful about: this counter resets at every deadline, so with Gameweek 3 under way it is already counting moves being made for Gameweek 4, not the ones made for this week. The last column is what matters to you: how many of your 22 rivals actually own each player.

Player	Club	Price	Bought across the game	Owned in your league
Gakpo	LIV	£7.1m	157,751	2 of 22
Wissa	NEW	£6.1m	116,850	1 of 22
Isak	LIV	£9.0m	103,088	8 of 22
Palmer	CHE	£9.6m	96,382	2 of 22
Rogers	CHE	£7.5m	79,629	3 of 22
De Cuyper	BHA	£4.7m	75,676	5 of 22

Player	Club	Price	Bought across the game	Owned in your league
Cherki	MCI	£7.8m	71,949	8 of 22
Hall	NEW	£5.1m	71,923	2 of 22

Two things stand out, and both support the decision you made.

Gakpo is the most-bought player in the game right now, on 157,751 transfers in after scoring 11 points this gameweek. In your league he is owned by 2 of the 22 managers.

The national number is never your number. Your rank depends only on these 22 people, so a move that looks enormous across the whole game can be almost invisible here. Bandwagons also move faster than a transfer can pay for itself: Sangaré led this list two weeks ago on about 176,000 buyers and is now on 34,832, owned by 1 of your 22.

What the best managers are doing

#	Manager	Median finish	Rank now	Points
1	Will Kenji	151,489	4	222
2	harrison white	151,736	9	196
3	Kieren Khatri	192,647	10	192
4	Wes Towner	343,588	7	208
5	Vishal Perera	360,721	2	230
6	Dhananjay Pandya	457,742	8	197

The five most consistent managers are already spreading out again, which is the same pattern as last week. Two of them sit near the top and two near the bottom. It stays too early to read anything into it.

The structural difference has not moved, because you did not move. Those five carry about £36.3m in midfield against your £25.5m, a gap of **£10.8m**. They keep defence near £17.6m against your £16.0m.

What to watch

Your own plan was to wait for more information rather than spend a transfer, and this week's data supports that. Fifteen managers did the same, the biggest national bandwagon reached one team in your league, and nine of ten matches are still to play.

The question worth answering over the next three or four weeks is whether Sangaré's points come from goals and assists or from defensive contributions, because those repeat at very different rates. Defensive returns are the more repeatable of the two.

Where the numbers come from

The official Fantasy Premier League API, pulled during Gameweek 3 with 8 of 10 matches played. Transfer counts come from each manager's transfer log rather than the summary field, for the wildcard reason above. Rebuild everything with `scripts/league_report.py` then `scripts/league_story.py`.
